

KHIE'S CLINICAL INFORMATION APPLICATION

Comprehensive Clinical Data When and Where You Need It

KHIE is Kentucky's statewide health information exchange, offering providers secure access to patient information from across the healthcare continuum.

KHIE's Clinical Information application gives providers access to a longitudinal patient record that spans participating healthcare organizations across Kentucky. Whether delivering direct patient care, coordinating transitions of care, or making time-sensitive clinical decisions, users have access to the information needed to make more informed decisions and reduce gaps in care.

Information Sources

- Hospitals and health systems
- Primary care providers
- Emergency departments
- Specialists
- Laboratories and Imaging centers
- Pharmacies
- Long-term care facilities
- And more across the KHIE network

Types of Information

- Clinical notes and documentation
- Encounter histories
- Encounter documentation
- Problem lists
- Laboratory results
- Medications and allergies
- Immunizations

Key Features Include		
EHR Integration Access Clinical Information directly within your existing EHR workflow, reducing the need to log into multiple systems and helping providers find important patient information faster.	Timeline View Quickly spot trends and changes in laboratory results with the Timeline View, which provides a chronological display of available test results from the past five years and reduces time spent searching through pages of results	My Patient Summary Create a personalized view by pinning up to eight frequently used tabs and pages. Keep the information you use most at your fingertips and reduce time spent navigating between screens.

Why Providers Use KHIE

- **Access** a longitudinal patient record
- **See** care delivered outside your organization
- **Improve** medication reconciliation
- **Reduce** duplicative testing
- **Support** informed clinical decisions
- **Enhance** care coordination
- **Improve** transitions of care
